It is a fundamental property of many binary operations, and many mathematical proofs depend on it. Most familiar as the name of the property that says " $3 + 4 = 4 + 3$ " or " $2 \times 5 = 5 \times 2$ ", the property can also be used in more advanced settings. The purpose of this book is to extend this Fri, 07 Dec 2018 03:00:00 GMT Noncommutative Geometry Alain Connes - C*-algebras (pronounced "C-star") are an area of research in functional analysis, a branch of mathematics. A C*-algebra is a complex algebra A of continuous linear operators on a complex Hilbert space with two additional properties: . A is a topologically closed set in the norm topology of operators.; A is closed under the operation of taking adjoints of operators.
