

## programmed cell death in plants and animals

Wed, 05 Dec 2018 11:31:00 GMT programmed cell death in plants pdf - Programmed cell death (or PCD) is the death of a cell in any form, mediated by an intracellular program. PCD is carried out in a biological process, which usually confers advantage during an organism's life-cycle. For example, the differentiation of fingers and toes in a developing human embryo occurs because cells between the fingers apoptose; the result is that the digits are separate. Fri, 07 Dec 2018 13:16:00 GMT Programmed cell death - Wikipedia - Cell death is the event of a biological cell ceasing to carry out its functions. This may be the result of the natural process of old cells dying and being replaced by new ones, or may result from such factors as disease, localized injury, or the death of the organism of which the cells are part. Kinds of cell death include the following: Fri, 07 Dec 2018 19:49:00 GMT Cell death - Wikipedia - CSIR-UGC National Eligibility Test (NET) for Junior Research Fellowship and Lecturer-ship LIFE SCIENCES 1.
